ABSTRACTED-PUB-NO: WO 200223521A

BASIC-ABSTRACT:

NOVELTY - An audio track is selected from an archive containing WAV, MP3, MIDI and proprietary files. An advertisement information is selected from another archive and encoded along with selected audio track and audio player information into software executable file.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also include the following:

- (a) Data encoder;
- (b) Data decoder

USE - For providing music files such as songs, albums through internet.

ADVANTAGE - Allows a user to download copyrighted audio tracks without infringing the law and play them in an easy and user-friendly way without requiring external music player. Allows music authors and makers to approach largest possible amount of users. New album on music product can be launched on internet, more effectively, as the risk of illegal copying of songs is prevented.

DESCRIPTION OF DRAWING(S) - The figure shows the schematic block diagram of the files encoder.

## BASIC-ABSTRACT:

NOVELTY - A method for providing various music and motion picture player windows online and an operation method therefor are provided so that users can select their individual player windows by storing windows designed by designers in a server, such as MP3, real player and window media player.

DETAILED DESCRIPTION - A display unit(4) displays various information downloaded through the Internet, including music, background screens, advertisements, events and movies, and a file storing unit(5) downloads the information stored in a server such as the music, background screens, advertisements, events and movies, and stores the file in a client to be played by a player. A real time data transmission/reception unit(6) controls the real time data communication between the server and the player. A player control unit(7) controls functions of all the players, namely a volume, a graphic and file information. On the other hand, a display window(100) includes a rewind button(20), a play button(30), a stop button (40), a track, time and select function button(50), and a volume, advertisement and advertisement information button(70), which are designed by a designer according to wanted information of the user.

ABSTRACTED-PUB-NO: WO 200180219A

## BASIC-ABSTRACT:

NOVELTY - System comprises a music tracks controller providing an interface for connecting a device driver during operation, and device drivers. An electronic music player manages the tracks by displaying a hierarchical graphical library tree classifying the tracks into sets and sending them to the renderer on user request.

DETAILED DESCRIPTION - The controller can request the device driver to provide a description of each storage object supported and the capacity of the storage.

devices. The interface requires the device driver to provide the number of tracks, has an interface storing artwork, credits and lyrics and defines the selected bit-rate.

There are INDEPENDENT CLAIMS for (1) a music management system, (2) a method of manufacturing a system for integrating music renderers with an electronic music player, (3) a method of transmitting a track from a computer to a music renderer.

USE - System is for computer MPEG and MP3 storage of downloaded music.

ADVANTAGE - System enables easy copying and movement of music between PCs and renderers and automatically transforms formats.

DESCRIPTION OF DRAWING(S) - The figure shows a network configuration for the system.

INT-CL (IPC): G11 B 0/00

ABSTRACTED-PUB-NO: RD 440032A

### BASIC-ABSTRACT:

NOVELTY - This is a replacement of the existing big CD-box exchanger placed in the trunk of the car. In order to preserve compatibility with the existing audio sets, the same API used to control the CD box should be used to control the Mp3 box. For the user the controls over the Mp3 songs are identical to the controls over normal CD tracks. The Mp3 box can be loaded with music from normal CD's in the car, or from the Internet. Wireless downloads from Mp3 radio broadcasts during car driving is an option.

USE - Mp3 box for audio sets in vehicle.

ADVANTAGE - Such a Mp3-player has not limits to 6 or 10 CD's, and the physical size of the memory chips is smaller than the size of the CD's. The shock absorption is no longer an issue, as there are no reading laser heads.

DISCLOSURE TITLE: A Scheduling Algorithm for Transferring smaller sized files faster than Larger sized files for multithreaded data transfer applications

PUBLICATION-DATA:

IBM technical Disclosure Bulletin, December 2001, UK

ISSUE NUMBER: 452

PAGE NUMBER: 2087

PUBLICATION-DATE: December 1, 2001 (20011201)

CROSS REFERENCE: 0374-4353-0-452-2087

DISCLOSURE TEXT:

1.0 A Scheduling algorithm for transmitting files of smaller sizes faster than larger sized files. 1.1 Introduction This algorithm below describes a method of scheduling different threads of a multi-threaded TFTP server (where a separate thread handles each client request) so that the smaller requests get higher priority. The benchmarking tests stated below also indicate that the tests done with various file sizes indicate that the algorithm works as per design. The illustration is done with a TFTP server implementation, which has the File Size transfer option negotiation. 1.2 Overview of the algorithm As noted before the program will start a new thread to handle each of the incoming requests. Now to improve the performance of the TFTP server with respect to smaller file size requests, we need to keep track of how much of a file has been sent at a given point of time or this purpose we will keep a global data structure, which will store the amount of file sent for each of the connections currently in progress. Now for such a structure we will use a linked list. The name of the list will be TransferList.
